1.1 Course overview

The course “Supercomputer technologies for solving problems of research activities” is designed to help graduate students master modern supercomputing technologies to perform scientific calculations in their respective professional fields. Students will receive an extensive overview of supercomputing technologies. During their studies, they also will learn how to work with high-performance cluster systems running under the Linux operating system.

The course will use IBM supercomputer complex.

1.2 Special features

The course provides an opportunity to graduate students to work with supercomputer closely on their own scientific tasks.

1.3 Course aims and objectives

Course Aims

- **The aim** of the course is graduate students teaching a modern technology of high-performance computing that will perform them scientific calculations in their professional fields.

Course Objectives

- to familiarize graduate students with specifics of parallel computing;
- to acquaint graduate students with the current trends in supercomputing technologies;
- to teach graduate students to perform scientific calculations on supercomputer complexes.

1.4 Learning outcomes

By the end of the course, graduate students will know:

- current trends in supercomputing technologies;
- principles of organization of supercomputer complexes;
- modern parallelization tools.

By the end of the course, students will be able to:

- ability to apply modern supercomputer technologies to accelerate scientific and technical calculations;
- use the acquired knowledge to select tools for effective solution of scientific and practical problems on supercomputer complexes.

By the end of the course, students will possess:

- the necessary skills for carry out of scientific calculations onto supercomputer complexes.
2. Course Lecturer, Contact Information

Dr. Dmitry A. Kuzmin,
PhD in Technical Sciences, Associate professor,
Head of HPC Department,
Krasnoyarsk State Technical University, Faculty of Informatics and Computer Science
(room ULK 4-06) 26, Kirenskogo st, Krasnoyarsk, Russia
e-mail: dkuzmin@sfu-kras.ru
Google Scholar:
Profile on another site(s):
ORCID:
Web of Science ResearcherID: AAF-8808-2019
Additional information is available at:
http://structure.sfu-kras.ru/node/1270

3. Prerequisites

A background in OS Linux and programming will help in faster and better understanding of every topic. Nevertheless, each part of the course includes a short introduction of methods that are required for its study. Therefore, a graduate student without the denoted experience must be encouraged to make some additional efforts in education.
4. Course Outline

4.1 Course requirements

4.1.1 Web-page of the course

Course materials and required reading materials are available on the webpage of the SibFU E-learning portal. You must be logged in to access this course. [https://e.sfu-kras.ru/course/view.php?id=27851](https://e.sfu-kras.ru/course/view.php?id=27851)

4.1.2 Required reading

The main book for this course is The Course Book. It provides students with all the information they need to master methods and tools for research in science field.

   https://www.researchgate.net/publication/324011061_The_Student_Supercomputer_Challenge_Guide

4.1.3 Course materials

The main materials that will guide a student through the course are available on the webpage of the SibFU E-learning portal. It contains all of topics of this course according to the schedule. It will provide you with useful links that help graduate students to improve their understanding of the topics.

4.1.4 Required feedbacks

Graduate students are free to contact the lecturer by email. The name of department and a number of a group should be written in the subject or in the beginning of the letter for convenience. More information on how to contact the lecturer can be found in «Lecturer information» section of this Guide.

Student’s Home or Seminars reports must be attached as a separate pdf file. Student’s name and group number should be written on the first page of the file. Students send this report in electronic form only before the deadline.

If necessary, the lecturer will schedule a video-conference, upon request.

<tr>
<td>Final exam</td>
<td>10</td>
<td>Two questions about the course material studied</td>
</tr>
</tbody>
</table>

Grading policy for final assessment is:

- A (excellent work) 91–100 points
- B (above average) 81–90 points
- C (average) 71–80 points
- D (below average) 50–70 points
- F (failed) < 50 points

The final exam is oral and written test. Students should be able to answer two short theoretical questions.

6. Attendance Policy

Students are expected to attend classes regularly. In case of missing an in-lab activity a student should perform additional work submitted to the instructor within a week after a class was missed.

Every topic involves an assignment. A written report on the assignment should be submitted within two weeks from the moment students received a list of problems. The final mark will rely on the same grading policy as for the final exam.

7. Required Course Participation

There are no special requirements for the course participation. The preferred type of report submission is the electronic one. Students can use the web-version of the course (link) for a better progress. All problems for solution could be found there together with text from the course book.

8. Facilities, Equipment and Software

Software:
• Linux operating system
• NVidia CUDA Toolkit
• MPI (MPICH), OpenMP

All software is free, no license required

**Laboratory equipment:**

IBM supercomputer cluster system
Annex 1 Example of Pre-Course Test Questions

1. The concept of a process in Linux.
2. The concept of thread.
3. Classification of computer systems.
4. Main features of the Linux system
Annex 2 Outlines of Seminar works

(List one. The title)
"SIBERIAN FEDERAL UNIVERSITY"
